If you are always discouraged by the results of your performance in photographing whatever camera you use (single-lense reflex or budget digital camera), you can make your pictures splendid ones AFTER you snapped with some help of photo editing website such as "Picnik"!

(Picnik homepage: <http://www.picnik.com/app#/home/welcome> (free of use)

You can modify your pictures' colours, exposure and brightness, also add some stickers or stamps, change tones, eras (ex.1970's), and make collages.

It's up to you to pursue reality and dislike using this kind of editing tools but distinct results after editing surely make you fun!

Why not pick one of your photos and try? :)
